

Over 5,000km of DCVG survey completed in the last 10 years and 100 successfully completed surveys

## DIRECT CURRENT VOLTAGE GRADIENT SURVEY (DCVG)

As pipelines age, the applied protective coating systems also age and deteriorate. DCVG is an aboveground, non-intrusive survey method used to verify and assess the condition of buried pipeline coating systems and accurately locate coating defects. With coating defects identified, the surveyor takes additional measurements to determine the severity of the defect against internationally recognized criteria and determine what remedial action is required.
